# CS 202: IT Workshop I
# Assignment I (Group: GG1)

1. Write a Java program for the followings:

   a) To print your name in <First name> <Last name> format.
   b) To print your name in double quotes (e.g. "Manojit Ghose").
   c) To print only your last name; but both of your first name and last name will be passed as argument in the console print function System.out.println() as in part a).
   [This should work when number of characters in first name is more or less than that of last name]

2. Write a Java program to do the followings:

   a) To perform addition of two integers, store the result in another integer and display the result.
   b) To subtract one integer from another, store the result in another integer and display the result.
   c) Write one print statement to display the results in a sentence.
   (e.g. The addition of 5 and 2 is 7 and when 2 is subtracted from 5, result is 3)

Notes:

   1. Run the above programs in Console without using any IDE.
   2. Create only one Class in a File and perform the operations inside the main() function.
